

TEN CLIMATE & ENERGY PODCASTS TO FOLLOW IN 2025

Interest in podcasts has surged in recent months, with more Americans than ever consuming in-depth episodes on a range of topics—including climate, clean energy and climate tech. One estimate finds that, in 2024, 135 million Americans reported listening to a podcast in the past month—up from 120 million the year prior. That’s nearly 50 percent of all Americans over the age of 12. Among the more specific audiences—policymakers and elected leaders, investors, regulators, reporters—that climate tech startups, clean energy and climate advocacy organizations seek to reach, listenership is almost certainly higher.

Podcast Listeners in the US

CATALYST WITH SHAYLE KANN

From Latitude Media, Catalyst is hosted by Shayle Kann, a partner at Energy Impact Partners and the former Head of GTM Research. Kann interviews climate experts, investors, researchers, and industry executives on the latest innovations in climate technology and how they can decarbonize the planet while minimizing cost.

Why You Should Listen: As a climate technology investor, Kann has the industry expertise to discuss the issue of money in the fight against climate change. He asks important questions like “How cheap can clean energy get?” and “Where is investment money going into climate technologies?”
